

The Use of Pervious Concrete for Stormwater Management

Poplar Grove Boat House - Hollywood, SC

6:30 pm, April 25, 2007

To: Developers, contractors, consultants, engineers, and town officials

The ACE Basin Coastal Training Program (CTP) and the Town of Hollywood are pleased to offer a seminar on **Wednesday, April 25th at 6:30pm** discussing the use of pervious concrete for stormwater management. When properly installed and maintained pervious materials are efficient, cost-effective and underutilized tools for managing stormwater runoff. By allowing stormwater to infiltrate in areas that are conventionally covered with impervious materials (such as parking lots, driveways, and sidewalks), pervious concrete can greatly increase on-site retention of stormwater, thus reducing the need for off-site stormwater detention or treatment and helping to protect the quality of down stream natural waterways.

This seminar is designed to give general information on the basics for laying pervious concrete, as well as, the economics of pervious versus conventional concrete. The seminar will be held at the **Poplar Grove Boat House** in Hollywood, SC. There is no registration fee for the seminar; however, seating is limited, so please pre-register by returning the registration form below, or contacting Rebekah Szivak by phone (843-953-9024) or e-mail (WalkerR@dnr.sc.gov) by **April 20th**. Snacks will be provided by the Town of Hollywood. Directions to Poplar Grove: Heading south on US 17, take a right on Davison Rd. 6.5 miles after the intersection with I-526. Heading north on US 17, Davison Rd. will be on the left before the Rantowles Creek Bridge. Poplar Grove is approximately 1.2 miles on the right and the Boat House is in the back of the community by the Sales Office.

Please feel free to share this announcement with colleagues who may be interested in the event.
